

# CHIMINEA SETUP INSTRUCTIONS

## STEP 1. VENTILATE AREA

---

Make sure your chiminea is setup in a well-ventilated area.

## STEP 2. OPEN WORKSPACE

---

Do not set your chiminea up indoors or on a patio with a roof over it.

## STEP 3. SOLID/NONE FLAMABLE SURFACE

---

Be careful of the surface you are placing your chiminea on. Do not place it directly on a wood surface.

## STEP 4. USE THE CORRECT HEATING SUBSTANCE

---

Fill your chiminea with lava rock. Do not use sand or hard rock gravel of any kind. Sand or hard rock gravel will spit sparks at you when they get heated.

## STEP 5. USE THE CORRECT AMOUNT OF WOOD

---

Put your firewood on top of the lava. Chiminea's are for small mood fires. Use kindling for wood and keep it small. Too large of a fire will crack your chiminea.

## STEP 6. CLEANING

---

Clean your chiminea as needed. Remember this is a chiminea, take care where you place it and how you use it. It will bring you lots of enjoyment if used properly.
